Fire Industry Association

» Ultimate Peace of Mind

We are a central UK based company with over 20 years experience in the Fire and Security industry. Offering nationwide coverage, our dedicated Fire and Security experts are on hand 24/7.

We know you want the ultimate peace of mind, knowing that your company's security is in safe hands and that's what we deliver.

Infinite Fire and Security offer a range of fire and security solutions, from design and installation through to maintenance and monitoring. We also provide a responsive 24 hour emergency call out service.

Using the latest technology and highest quality products, we provide the very best cost effective systems and all work is carried out by our own certified engineers.

Operating from our dedicated office in the heart of Yorkshire, our friendly team are on hand to discuss your requirements.

We bring together a mix of expert engineers, sales advisors and office administrators to provide a service which will help prevent, detect and monitor your fire and security risks.

» Fire Alarms

We offer a comprehensive range of fire alarm systems and take care of everything from the design stage through to installation, commissioning and hand-over.

It's crucial that your fire alarm system is designed to meet the specific needs of your company. That is why we offer a free site survey to discuss the best system for your business needs.

Our fire alarm systems are installed by our own engineers to meet British standards BS5839:PART-1 2017 and all our design staff are trained by the BFPSA/FIA. Our equipment is of the highest quality and is designed to minimise the risk of false alarms.

The most common types of Alarm Systems include:

Non-addressable systems

These are best suited to smaller buildings and usually consist of 10 to 25 detection devices.

Addressable systems

These are usually found in larger buildings and are capable of complex programming to provide a wide range of applications. For example, ventilation systems, fire breaks and the closing of fire doors on corridors.

Radio fire systems

We will usually suggest this type of system when wiring isn't possible, such as in listed buildings including churches and stately homes.

Your company will be provided with a drawing of the system layout. This will be required if you wish to add to the system in the future, or to detect problems.

Before we hand-over the completed fire alarm system, checks will be carried out to ensure every aspect of the work meets the specifications in the plans exactly. The full system will be tested to make sure everything works, as it should. You will then receive all the necessary documents, certificates, operating manual and logbook.

» Fire Extinguishers

We can supply, install and maintain all types of Fire Extinguishers and Fire Blankets and can advise you on the best options to meet your specific needs.

The most common types are:

- Water Extinguishers (Red)
- Foam Extinguishers (Cream)
- Powder Extinguishers (Blue)
- Carbon Dioxide Extinguishers (Black)
- Wet Chemical Extinguishers (Yellow)
- Fire Blankets

» Fire Risk Assessments

Infinite Fire and Security are specialists in Fire Risk Assessments.

We will attend your site, discuss your requirements and our NEBOSH (National Examination Board in Occupational Safety and Health) qualified assessor will carry out the Fire Risk Assessment. On completion we will provide you with a full report of our findings including suggested corrective measures to make your building a safer environment and complying with the current fire legislation.

This can all be done with minimal intrusion and can be booked at a time to suit you.

» Emergency Lighting

We provide the latest solutions to emergency lighting including general mains emergency fittings, both maintained and non-maintained.

We can supply a vast range of fittings from explosion proof, IP65 waterproof outdoor fittings, decorative emergency fittings to standard LED bulkheads.

We provide a full service from site visit, full design, installation, commission and hand-over documentation all to comply with BS5266 the latest standards and local fire officer requirements.

» Networking

We can provide the basic back-bone for your IT needs by installing the data cables and ancillaries required for your office applications.

Local Area Networks, Network Infrastructure and Ethernet/Patch Cabinets.

» Test & Check

We offer a full site PAT (Portable Appliance Testing) service with full certification issued on completion.

As a business you are required by law to protect all users of portable appliances from electrical shock as well as fire hazards. PAT Testing should be carried out to protect your employees, customers and you against accidents and liability.

» Mobile Broadband

Our IFS Router is ideal not only for use where wired broadband is limited or slow, but also where wired broadband is unavailable. This enables us to install monitoring to the most remote sites.

As internet connectivity can be vital to the running of a business and something you simply cannot operate without, the IFS 4G back-up option will upgrade an existing broadband service to a private network. It also provides a reliable failover business solution if your wired broadband goes down.

- **Static IP address allows remote access into the system without interfering with any IT infrastructure**
- **Instant 4G connectivity - no waiting around for a broadband provider's engineer**
- **Ideal where wired broadband is unavailable, limited or slow**
- **Provides convenient wireless hub connectivity to other on-site Wi-Fi enabled devices**
- **Suitable for permanent and temporary installations**

The choice of intruder alarms include:

Bells only

Rings internal and external sounders when an alarm is activated.

Auto-dialler

This is the same as a bells only system except it also has a speech unit fitted which is capable of dialling four telephone numbers to alert you when the alarm goes off.

Monitored

This sends signals to an Alarm Receiving Centre (ARC). The ARC will process these signals and alert the key holders and police if necessary.

Smart

Control your security directly from your smart phone or tablet device.

» Intruder Alarms

At Infinite Fire and Security we know a company's buildings, the equipment and sensitive information they contain, are the most important things you own. They are the future of your business so it's only natural you want to protect them.

Whether you want a complete system installing - or an upgrade to an existing one - we offer a free site survey to determine the best set up for you. We can fit intruder alarms to all types of properties from small offices and shops to large commercial premises.

All our user friendly alarm systems are designed, installed and maintained to meet your individual requirements. They also comply with the latest European standards for intruder alarm systems - EN50131, Pd6662:2004 and DD243.

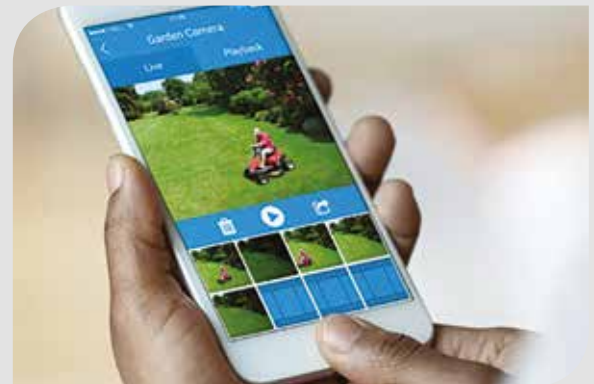

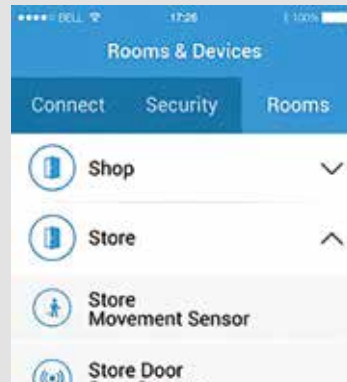

Telephone 0845 1110423 Email sales@infinitefiresecurity.co.uk

Take control of your security like never before. Infinite Fire and Security can install a smart alarm that will open up a new world of possibilities.

Your **Infinite Connected App** will allow you to control your security directly from your compatible smart phone or tablet device. Control your security system, receive notifications of system events and monitor cameras or activity from anywhere in the world.

Automate and control lighting, power, video and appliances. Create your own automation 'recipes' to automatically turn on lights when a room is entered or turn off appliances when you're out of the building. Create dedicated 'modes' that control all aspects of your business automation all at once.

Intruder Alarms / Smart Alarms | Infinite Connected

» Access Control

We offer a complete design, installation and maintenance package that is tailored to your business requirements.

By managing and monitoring access into and from any area or building, our flexible systems can ensure complete control over any site, protecting your property, personnel and visitors.

From simple systems consisting of access control for single doors, ranging up to multi-site high security systems that incorporate the control of hundreds of card readers located around the site.

Access Control systems can be as flexible or as rigid as required, from allowing all employees access to all areas, to a comprehensive system which can

be adjusted according to levels of security across employees and area.

Simplified systems can be as simple as just a single door to more complex PC based multi-door system with bespoke designed readers.

Bespoke designed readers can include company logos and specific messages.

Biometric Systems

Biometric Access Control (finger print readers) can offer advantages over standard access control.

This can seem futuristic, but with biometric finger print readers this gives a control system that cannot be falsified.

Biometric readers can help with staff time, attendance and management, they are easy to use and programmed exactly to your requirements.

Intercom Systems

We have many types of intercom systems available. They range from voice only systems to sophisticated video link to many different doors and rooms.

A range of handsets are available from audio only to colour video - all have facilities for remote unlocking of any door and come in many different varieties.

Call stations can be ordered to suit individual needs and can include key-code or fob/card swipe for personal entry or just a simple call button.

Our services include:

- Cash till CCTV for monitoring of cash till transactions
- Remote CCTV - your CCTV system can be monitored from your PC or a manned control centre
- IP CCTV web cams and video servers can avoid the need to run cables
- Wireless CCTV interlink buildings and offices
- Bespoke CCTV - tell us your requirement and we will provide a solution
- Process control CCTV for manufacturing plants, machinery and all work place monitoring
- Fixed camera and pan, tilt and zoom systems

» CCTV

We are passionate about keeping your business secure which is why we cover many specialist requirements from full CCTV surveillance, to covert cameras.

Our qualified team of CCTV specialists can design a fully bespoke system to meet your requirements.

Infinite Fire and Security are a Security Systems and Alarms Inspection Board (SSAIB) registered company. SSAIB, under their code of practice SS2003, will inspect a registered company to ensure they are installing and maintaining CCTV systems to a recognised standard.

This gives you peace of mind, with a guarantee of our installation.

We offer a wide range of quality CCTV systems including thermal cameras, video intercom, display & control.

The CCTV systems we supply and install can easily be integrated with other security products.

» Our Accreditations

Access Control
Systems

CCTV
Systems

We are committed to compliance and legislation, ensuring we adhere to the latest industry standards.

We are proud to carry the latest accreditations and be part of the industries leading associations.

But what do they mean?

Here we explain a little more about our three main accreditations; BAFE, SSAIB and the FIA.

The British Approvals for Fire Equipment (BAFE)

BAFE is the independent register of quality fire safety service providers, certified to ensure quality and competence to help meet your fire safety obligations. This is the best assurance of quality.

All BAFE registered companies have been independently and regularly assessed by a UKAS Accredited Certification Body to ensure they are competent to deliver what you require.

This assessment is voluntary, meaning BAFE accredited companies are passionate about demonstrating how committed they are to quality, showing they are skilled professionals.

Your insurers will be interested in seeing evidence that the company you choose for your fire safety requirements are competent.

Infinite Fire and Security are fully accredited in:

- ✓ **BAFE Design SP203-1**
- ✓ **BAFE Installation SP203-1**
- ✓ **BAFE Maintenance SP203-1**
- ✓ **BAFE Commissioning & Handover SP203-1**

The Security Systems and Alarms Inspection Board (SSAIB)

The SSAIB is a leading certification body for organisations providing security systems and services, approved contractors scheme and monitoring services. SSAIB's schemes comply with all Police policies and insurers - often as a condition of their underwriting - place particular demands on security and fire and safety system providers.

The aim of the SSAIB is to ensure end users and purchasers of security systems, fire detection and alarm systems, have access to competent, professional providers of products and services.

When it comes to protecting your home and business from the impact of crime or fire, you can't afford to take any chances. The correct choice of fire or security protection systems is vital.

Having a certified provider that you can trust will ensure peace of mind - as well as demonstrating to your insurer that you have acted responsibly to protect your home or business.

Infinite Fire and Security are fully accredited in:

- ✓ **Intruder Alarm Systems (NPCC)**
- ✓ **Access Control Systems**
- ✓ **CCTV Systems**

The Fire Industry Association (FIA)

The Fire Industry Association is the largest fire protection trade association in the UK. They are a major provider of fire safety training. The FIA's objective is to promote, improve and perfect fire protection methods, devices, services and apparatus.

Credibility is key and independent third party compliance is part of the authority. As the FIA is the largest association, Government and regularity bodies take into account companies registered with the FIA.

Infinite Fire and Security are registered with the FIA and are proud to attend new courses when provided.

» Key Facts

Here's 9 key facts we believe you should know to help keep your business, premises and staff safe and secure.

- 1.** All business premises and every block of flats must have a Fire Risk Assessment by law. If your company has four or more regular employees in the building, then a Fire Risk Assessment must be documented.
- 2.** If your fire alarm is not installed to BS5839 specifications, you may not be covered for regulatory or insurance purposes.
- 3.** Portable Appliance Testing (PAT) is not a legal obligation, however UK legislation states that businesses must maintain electrical equipment in a safe condition. They also have a legal responsibility to ensure the safety of employees.
- 4.** UK regulations state that you should have a minimum of two 'Class A' fire extinguishers on every storey of a building (Class A extinguishers could be three or six litre foam, or nine litre water). If your premises are very small and two would be a hindrance to escape routes, then only one may be needed.
- 5.** If you are considering having or already have a CCTV system installed, you or your installation engineer must ensure that the relevant legislation and guidelines are adhered to.
- 6.** All business premises need to display fire safety signs. A Fire Action Notice must be displayed in commercial buildings. For complex buildings, fire exit signs are a necessity. All fire exit doors must carry a 'Fire Door, Keep Shut' sign. All fire extinguishers must have a sign displayed stating the type and use.
- 7.** Emergency lighting is a legal requirement of the Regulatory Reform (Fire Safety) Order 2005. BS5266 specifications state the minimum safe standards for certain types of buildings, but higher standards may be required depending on specific installations.
- 8.** Security and insurance industries use the British PD6662 standard, which states structured risk assessment procedure for designing intruder alarm systems. Determining the correct grade of alarm is directly proportional to the insurance value of a property and contents. This can also determine the methods used for the systems tamper security and define notification options. Insurers may state the grade of system and type of installation too.
- 9.** BS5839-6 is a regulation for fire detection in domestic premises and is the authoritative guidance for all housing. Minimum levels of protection are split into two categories; Up to three storeys above ground level, and, over three storeys above ground level, large houses or higher risk. England and Wales have different category requirements to those in Scotland or N. Ireland.

» Our Customers

Infinite Fire and Security are able to offer specialist services across a broad range of industries with very varied needs, including Health & Social Care, Nurseries & Schools, Manufacturing, Offices, Retail, Food Production and more.

Here's a few words from our happy customers:

“ We like to deal with local companies and when Chris came to visit I felt very much at ease. The service I have had has been first class - swift to react to a call out and knowledgeable when dealing with our old system. First class company, large enough to cope small enough to care. ”

The Ashton Group

“ Thanks Chris for our commercial alarm/fire safety system fitted last month. The service was A1 and when we had one sensor that wouldn't connect Chris came straight out and sorted it. We are now wanting a CCTV system and wouldn't look anywhere else. Would highly recommend. ”

MCD Home & Garden

“ Quick efficient service and quality products. ”

Securtask Ltd

“ What I liked about the service is the knowledge and professionalism from Chris and the staff, going over and above to ensure the best delivery of equipment and service. Added extra little touches of the bespoke services and equipment, excellent customer service and response time is second to none. ”

Chris and the team are extremely professional and friendly, continuing to put the customer first, understanding each and every aspect of the specialist service we provide. ”

Local Mencap Barnsley

“ Quick response when problems arise. Good reliable service. ”

FD & JJ Ayton

“ Good personal service. Great system and super after care service which is so reassuring. In all the years we have had the Infinite security and fire system we've been extremely impressed with how responsive Chris and the team are. Nothing is too much trouble and they've always been really quick to adapt things to suit us. Very professional company which I'd have no hesitation in recommending. ”

Yorkshire Bridge Inn

“ Very professional team with understanding and knowledge to what is needed. ”
